

Year 2: How does a botanist learn?

How does a seed grow?

1. seed
2. seedling
3. young plant
4. mature plant

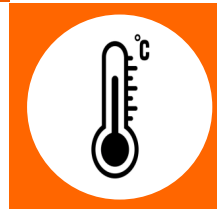

What does a plant need to grow and stay healthy?

water

the right temperature

sunlight

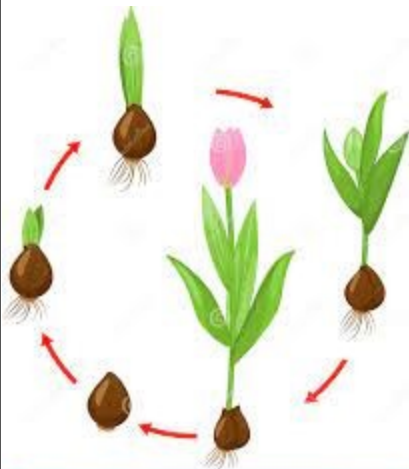

How could you prove that a plant needs water, sunlight and the right temperature?

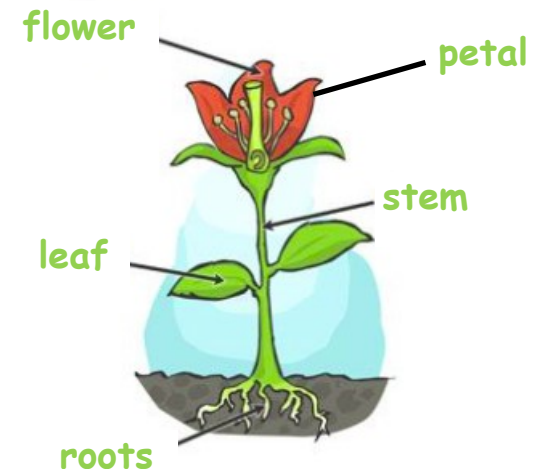

Vocabulary

cool	A fairly low temperature.
grow	When a plant (or living thing) changes in size and appearance.
healthy	The plant is growing well and has no signs of damage.
light	An energy produced by the sun. We can also produce light using electricity.
shade	When some, or most of the light, has been blocked.
sun	A large star that gives off heat and light.
warm	A gentle heat. A comfortable high temperature.
water	A clear liquid that all living plants and animals need.

How does a bulb grow?

A bulb grows as part of a cycle. At the end of the season, the plant returns back into the bulb and starts to grow again.
